The relationship between a fletcher (arrow maker) and his archer is one of ultimate trust as both lives depend upon it. An arrow that is too heavy, too light, not true or of poor quality will not last the distance or find its target. It is the craft and knowledge of the fletcher that works in synergy with the skill and accuracy of the archer. At Transfleet we believe that same principles apply between road transport engineers and road transport operators working in partnership to achieve common goals.

‘How can we work with you to reach your goals?’

Whether a simple wheelbase or a green fields turn key project Transfleet have the expertise to undertake your HPMV bulk project whatever the scope. Our in house engineering capability includes;

- CAD 3D modeling
- Finite element analysis
- Swept path analysis
- HPMV scope assessment
- Project management
- Both NZTA certified manufacturer and certified engineer on staff
- LT400 certification

Working with customers is what we do best!
